**The CEDIA community was first introduced to HomeWorks light control system in the early 1990s when Lutron pioneered the category of whole-home light control as a profitable business opportunity.**

Since its initial HomeWorks launch, Lutron continues to introduce line extensions and new products that both enhance the homeowner's lifestyle experience and their system capability, while helping installers sustain and grow their businesses.

The HomeWorks system has been widely accepted by residential system installers as the most reliable, robust lighting control system on the market. As the economy and market changes, Lutron continues to expand the HomeWorks line with innovative, new products, including an RF version of the system that uses the company's proprietary, RF technology; its line of round-button, backlit, seeTouch® keypads; energy-saving green features and more.

To further enhance their position as the category leader and expand the lighting control category, Lutron introduced an automated shade and drapery system (Sivoia QED®) that can be controlled via the HomeWorks system, allowing homeowners to control every point of artificial and natural light in their home with the press of a button.

HomeWorks truly sets the bar for excellence in whole-home light control systems, not only in the CEDIA community, but with architects, designers and homeowners alike.
